## Advanced Sliding-Mode Controller Design: Introduction

<b>1. Motivation</b> .....	1
<b>2. Methodology</b>	
<b>3. Results</b>	

3.1. Chapter 1: Sliding Mode Control Background.....	2
3.2. Chapter 2: Sliding Hyperplane Design	
3.3. Chapter 3: Variable-Structure System Controller Design.....	3
3.4. Chapter 4: Robust Sliding Mode Controller-Observer Design	
3.5. Chapter 5: Robust Discrete-Time Sliding-Mode Controller-Observer Design .....	4
3.6. Chapter 6: Robust Sliding-Mode Fuzzy Controller Design.....	5
3.7. Chapter 7: General Sliding-Mode Controller Design for MIMO Uncertain Nonlinear Systems.....	6
3.8. Chapter 8: Sliding-Mode Controller: Experimental Results	

---

## Chapter 1

# Sliding Mode Control Background

<b>1.1. Introduction</b> .....	1.1
<b>1.2. SMC Background</b>	
1.2.1. Hyperplane Equation	
1.2.2. Sliding Condition.....	1.2
Remark 1.1: Negativeness of Sliding Condition .....	1.3
Remark 1.2: Stability of Sliding Mode	
1.2.3. Sliding Dynamics	
1.2.4. Equivalent Control	

<b>1.3. Numerical Examples</b> .....	1.4
1.3.1. Example 1.1: Variation of System Structure	
Remark 1.3: Dimension of Sliding Hyperplane.....	1.5
1.3.2. Example 1.2: Uncertain System	
1.3.3. Example 1.3: Nonlinear System.....	1.7
<b>1.4. Conclusion</b> .....	1.8

---

## Chapter 2

### Sliding Hyperplane Design

<b>2.1. Introduction</b> .....	2.1
<b>2.2. Sliding Dynamics</b> .....	2.2
2.2.1. Sliding Dynamics Equation	
<b>Theorem 2.1: Sliding Dynamics Equation</b>	
2.2.2. Sliding Eigenvalue .....	2.3
<b>Theorem 2.2: Sliding Eigenvalues</b>	
Remark 2.1: Sliding Eigenvalues.....	2.4
Remark 2.2: Relation between Sliding Eigenvalues and Hyperplane Eigenvalues	
<b>2.3. Eigenvalue Allocation</b> .....	2.5
2.3.1. Full-State Technique	
(1) Partition Transformation Method	
<b>Corollary 2.1: Hyperplane Design by Partition Transformation Method</b>	
(2) Direct Allocation Method.....	2.6
<b>Corollary 2.2: Hyperplane Design by Direct Allocation Method</b>	
Remark 2.3: Application of Direct Allocation Method .....	2.7
Remark 2.4: Extensibility of Hyperplane Design by Direct Allocation Method to Nonlinear Systems	
<b>(3) Direct Calculation Method</b>	
<b>Corollary 2.3: Hyperplane Design by Direct Calculation Method</b>	
Remark 2.5: Hyperplane Normalization in Direct Calculation Method .....	2.8
Remark 2.6: Dimension of Sliding Variable and Extensibility to MIMO Systems	
2.3.2. Canonical Transformation	
<b>Theorem 2.3: Computation of Canonical Transformation Matrix</b>	
2.3.3. I/O-State Technique .....	2.9
<b>Theorem 2.4: Hyperplane Design by I/O-State Technique</b>	
Remark 2.7: Extensibility of I/O-State Technique to Nonlinear Systems.....	2.10
Remark 2.8: Decomposition of I/O-State Technique	
2.3.4. Proposition 2.1: Application of I/O-State Technique	

<b>2.4. Optimal Sliding Mode</b> .....	2.11
2.4.1. Error-Optimal Sliding Mode (Optimal Hyperplane 1)	
<b>Lemma 2.1: Performance Index of Error-Optimal Sliding Mode</b>	
<b>Theorem 2.5: Optimal State of Error-Optimal Sliding Mode</b> .....	2.12
2.4.2. Solution to the Optimal Hyperplane 1. ....	2.13
<b>Corollary 2.4: Hyperplane Design by Error-Optimal Sliding Mode Method</b>	
2.4.3. Error/Energy-Optimal Sliding Mode (Optimal Hyperplane 2)	
<b>Theorem 2.6: Hyperplane Design by Error/Energy-Optimal Sliding Mode Method</b>	
2.4.4. Solution to the Optimal Hyperplane 2 .....	2.15
<b>Theorem 2.7: Gradient of Performance Index in Error/Energy-Optimal Sliding Mode</b>	
2.4.5. <b>Numerical Algorithm for Solution to Optimal Hyperplane 2</b> .....	2.17
2.4.6. Proposition 2.2: Selection of Weighting Matrices Q and R .....	2.18
<b>2.5. Normalization of a Hyperplane Equation</b> .....	2.20
<b>2.6. Numerical examples.</b>	
2.6.1. Example 2.1: Direct Allocation	
2.6.2. Example 2.2: Partition Transformation .....	2.21
2.6.3. Example 2.3: Direct Calculation	
2.6.4. Example 2.4: I/O-State Technique for Linear Systems	
2.6.5. Example 2.5: I/O-State Technique for Nonlinear Systems.....	2.22
2.6.6. Example 2.6: Error-Optimal Sliding Mode	
2.6.7. Example 2.7: Error/Energy-Optimal Sliding Mode .....	2.23
<b>2.7. Conclusion</b>	

## Chapter 3

### Variable-Structure System Controller Design

#### Sliding Mode is extension of Variable-Structure System

<b>3.1. Introduction</b> .....	3.1
<b>3.2. SMC Stability Criterion</b>	
<b>Theorem 3.1: SMC Stability Criterion</b> .....	3.2
<b>Remark 3.1: Stability Test</b>	
<b>3.3. VSS Controller Design</b>	
<b>Lemma 3.1: Compact Control Function</b> .....	3.3
Remark 3.2: Simplification of Control Function By Hyperplane Normalization	
<b>Theorem 3.2: Switching VSS Controller Design</b>	
<b>Corollary 3.1: Conventional Reaching Controller Design</b> .....	3.4
<b>Corollary 3.2: New Reaching Controller Design</b> .....	3.5

Remark 3.3: Sliding Mode as Fast Mode for Invariance

<b>3.4. Proposition 3.1: SMC Design Rule</b>	
<b>3.5. Solution to Chattering Problem</b>	3.6
3.5.1. Switching Function	3.7
3.5.2. Saturate Function	
3.5.3. Unitvector Function	
3.5.4. Hyperbolic Tangent Function (TanH)	
Remark 3.4: Pseudo-SMC with Boundary Layer	3.8
3.5.5. Performance of Sliding Functions (Saturate, Unitvector and TanH Functions)	
Proposition 3.2: Application of Sliding Function	
Proposition 3.3: Solution to Problem of Chattering and Steady-State Error	3.9
<b>3.6. Integral VSS Controller Design</b>	
<b>Theorem 3.3: Integral VSS Controller Design by Integral Sliding Condition</b>	
Remark 3.5: Applicability of SMC Design Rule to Integral VSS	3.10
<b>Theorem 3.4: Integral VSS Controller Design by Augmented System</b>	
<b>3.7. Numerical Examples</b>	3.11
<b>3.7.1. Example 3.1: Canonical System</b>	3.12
(1) Original Design	
(2) Switching VSS	3.13
(3) Saturate VSS	3.14
(4) Unitvector VSS	
(5) TanH VSS	3.15
(6) Modified TanH VSS	
(7) Switching VSS by I/O-state of Relative Degree $r$	
(8) Error-Optimal Sliding Mode	3.16
(9) Discussion	3.17
<b>3.7.2. Example 3.2: Non-canonical System</b>	
(1) Original Design	
(2) Switching VSS	
(3) Saturate VSS	3.18
(4) Unitvector VSS	3.19
(5) TanH VSS	
(6) Modified TanH VSS	3.20
(7) Switching VSS by I/O-state of Relative Degree $r$	
(8) Error-Optimal Sliding Mode	3.21
(9) Performance compared with the Normal case	
<b>3.7.3. Example 3.3: Equal Excursion Sliding Mode</b>	
(1) Original Design	
(2) Switching VSS	3.22
(3) Saturate VSS	3.23
(4) Unitvector VSS	
(5) TanH VSS	3.24
(6) Modified TanH VSS	
(7) Switching VSS by I/O-state of Relative Degree $r$	
(8) Error-Optimal Sliding Mode	3.25
(9) Discussion	3.26
Remark 3.6: Comparison between Proposed Design and Equal Excursion Sliding-Mode Design	
<b>3.7.4. Example 3.4: Non-linear Hyperplane</b>	
(1) Original Design	
(2) Switching VSS	3.27
(3) Saturate VSS	
(4) Unitvector VSS	3.28
(5) TanH VSS	
(6) Modified TanH VSS	3.29
(7) Switching VSS by I/O-state of Relative Degree $r$	

(8) Error-Optimal Sliding Mode.....	3.30
(9) Performance compared with the Normal case	
Remark 3.7: Comparison between Proposed Design and Nonlinear Hyperplane Design	
<b>3.7.5. Example 3.5: Efficiency of Modified Design</b>	
(1) Conventional Design.....	3.31
(2) Modified Design .....	3.32
Remark 3.8: Performance of Modified Design	
<b>3.7.6. Example 3.6: Error/Energy-Optimal VSS .....</b>	<b>3.33</b>
<b>3.7.7. Example 3.7: Applications of I/O-State Method (Section 2.3.4)</b>	
(1) Relative Degree less than System Order.....	3.34
(2) Relative Degree equal System Order .....	3.36
<b>3.7.8. Example 3.8: A Simple Test of SMC Design Rule (Section 3.4)</b>	
(1) Violation 1 in SMC Design Rule: Sliding Time much smaller than Reaching Time	
(2) Violation 2 in SMC Design Rule: Reaching Time much smaller than Sliding Time.....	3.38
<b>3.7.9. Example 3.9: Steady-State Error when Reducing Sliding Gain.....</b>	<b>3.39</b>
(1) Saturate VSS	
(2) Unitvector VSS .....	3.40
(3) TanH VSS.....	<b>3.41</b>
<b>3.7.10. Example 3.10: Integral VSS Control using Integral of Sliding Variable .....</b>	<b>3.42</b>
(1) Original Design	
(2) New Design .....	3.43
(3) Discussion	
<b>3.7.11. Example 3.11: Integral VSS Control using Integral of Output Error .....</b>	<b>3.44</b>
(1) Original Design	
(2) New Design .....	3.45
(3) Discussion	
<b>3.8. Conclusion .....</b>	<b>3.46</b>

## Chapter 4

### Robust Sliding Mode Controller-Observer Design

<b>4.1. Introduction.....</b>	<b>4.1</b>
<b>4.2. Robustness in SMC.....</b>	<b>4.2</b>
4.2.1. Invariance Condition to Uncertainties	
<b>Theorem 4.1: Sufficient Invariance Condition to Uncertainty</b>	
Remark 4.1: Form of Matching Condition.....	4.3
<b>Corollary 4.1: Alternative Form of Matching Condition</b>	
<b>Corollary 4.2: Canonical System with Matching Condition .....</b>	<b>4.4</b>

4.2.2. Invariance Condition to Disturbances.	
<b>Theorem 4.2: Sufficient Invariance Condition to Disturbance</b>	
Remark 4.2: Invariance Property of Sliding Eigenvalues under Matching Condition.....	4.5
<b>4.3. Robust VSS Controller (Discontinuous SMC)</b>	
Assumption 4.1: System Constraint on Parametric Variation	
<b>Theorem 4.3: Robust VSS Controller Design under Uncertainty and Disturbance</b>	
Remark 4.3: Robust VSS Controller Design under No Perturbations .....	4.6
Remark 4.4: Equivalent Control in Robust VSS Controller	
<b>Corollary 4.3: Robust VSS Controller under Reduced Parametric Variation.....</b>	<b>4.7</b>
<b>4.4. Robust Linear SMC .....</b>	<b>4.8</b>
4.4.1. Linear SMC	
<b>Theorem 4.4: Linear SMC Design</b>	
<b>Theorem 4.5: Closed-Loop Eigenvalues composed of Hyperplane Eigenvalues and Sliding Margin .....</b>	<b>4.9</b>
Remark 4.5: Reduced Order of Sliding Mode.....	4.10
4.4.2. Robust Linear SMC	
(1) Robust Linear SMC under External Disturbances	
<b>Theorem 4.6: Robust Linear SMC Design under External Disturbance</b>	
Remark 4.6: Validity of Theorem 4.6 under No Disturbance .....	4.11
(2) Robust Linear SMC under Parametric Uncertainties.....	4.12
<b>Lemma 4.1: Computation of Special Eigenvalues</b>	
<b>Theorem 4.7: Robust Linear SMC Design under Parametric Uncertainty</b>	
Remark 4.7: Robust Linear SMC Design under No Uncertainty.....	4.14
<b>Corollary 4.4: Robust Linear SMC Design under Reduced Parametric Variation</b>	
Remark 4.8: Equivalent Control in Robust SMC Design	
<b>Corollary 4.5: Applicability of Robust Linear SMC Design for Robust State-Space Control Design</b>	
(3) Robust Linear SMC under Matched Parametric Uncertainties .....	4.15
<b>Theorem 4.8: Robust Linear SMC Design under Matched Uncertainty</b>	
Proposition 4.1: Robust Linear SMC Design Rule	
Remark 4.9: Advantage of Robust Design Rule.....	4.16
(4) Robust Linear SMC under Un-matched Uncertainty and Disturbance	
<b>Corollary 4.6: Robust Linear SMC Design under Un-matched Uncertainty and Disturbance</b>	
(5) Alternative Formula for Robust Linear SMC.....	4.17
<b>Theorem 4.9: Alternative Robust Linear SMC Design</b>	

<b>Corollary 4.7: Alternative Robust Linear SMC Design under Reduced Parametric Variation</b> .....	4.18
<b>4.5. Robust Integral SMC</b> .....	4.19
<b>Theorem 4.10: Robust Integral Linear SMC Design under Uncertainty</b>	
<b>4.6. Robust Linear Sliding-Mode Observer</b> .....	4.20
<b>Theorem 4.11: Robust Linear Sliding-Mode Observer Design under Uncertainty</b>	
<b>4.7. Numerical Examples</b> .....	4.21
4.7.1. Example 4.1: No Perturbation .....	4.22
(1) Original Design	
(2) New Design	
4.7.2. Example 4.2: Matched Uncertainties.....	4.24
4.7.3. Example 4.3: Un-matched Uncertainty .....	4.26
4.7.4. Example 4.4: Un-matched Uncertainty and External Disturbance.....	4.28
4.7.5. Example 4.5: Linear State-Space Control and Linear Sliding-Mode Control for Uncertain Linear Systems.....	4.30
4.7.6. Example 4.6: Linear SMC for Nonlinear Systems.....	4.31
4.7.7. Example 4.7: Robust Integral SMC under Uncertainty and Disturbance.....	4.32
(1) Original Design.....	4.33
(2) New Robust Integral SMC Design.....	4.34
Remark 4.10: Performance of Pseudo-SMC .....	4.36
<b>4.8. Conclusion</b> .....	4.37

---

## Chapter 5

### Robust Discrete-Time Sliding Mode Controller-Observer Design

<b>5.1. Introduction</b> .....	5.1
<b>5.2. Discrete-Time Sliding Hyperplane Design</b> .....	5.2
5.2.1. Hyperplane Equation	
5.2.2. Equivalent Control	
5.2.3. Sliding-Eigenvalues .....	5.3
<b>Theorem 5.1: Discrete-Time Sliding Eigenvalues</b>	
<b>5.3. Robust Discrete-Time Discontinuous SMC (VSS) Controller</b> .....	5.4
<b>Theorem 5.2: Robust Discrete-Time Discontinuous SMC Design under Matched Uncertainty</b>	
Remark 5.1: Validity of Convergence Condition in Discrete-Time SMC.....	5.6
<b>5.4. A New Robust Discrete-Time Linear Sliding Mode Controller Design</b>	
5.4.1. Robust Discrete-Time Linear SMC under External Disturbance	

<b>Theorem 5.3: Robust Discrete-Time Linear SMC Design under External Disturbance</b>	
Remark 5.2: Sampling Condition in Discrete-Time SMC .....	5.7
5.4.2. Robust Discrete-Time Linear SMC under Parametric Uncertainties .....	5.8
(1) Matched and Unmatched Parametric Uncertainties	
Assumption 5.1: System Constraint on Parametric Variation	
<b>Theorem 5.4: Robust Discrete-Time Linear SMC Design under Parametric Uncertainty</b>	
(2) No Uncertainty .....	5.11
<b>Corollary 5.1: Robust Discrete-Time Linear SMC Design under No Perturbation</b>	
<b>Theorem 5.5: Closed-Loop Eigenvalues composed of Hyperplane Eigenvalues and Sliding Margin</b> .....	5.12
Remark 5.3: Sampling Condition equivalent to Stability Criterion with Unit Circle .....	5.13
(3) Matched Uncertainty	
<b>Theorem 5.6: Robust Discrete-Time Linear SMC Design under Matched Uncertainty</b>	
Proposition 5.1: Robust Discrete-Time Linear SMC Design Rule .....	5.14
5.4.3. Robust Discrete-Time Linear SMC under Uncertainties and Disturbances	
<b>Corollary 5.2: Robust Discrete-Time Linear SMC Design under Uncertainty and Disturbance</b>	
<b>5.5. Robust Integral Discrete-Time Linear SMC</b> .....	5.15
<b>Theorem 5.7: Robust Discrete-Time Linear SMC Design under Uncertainty</b>	
<b>5.6. A New Robust Discrete-Time Linear Sliding-Mode Observer</b> .....	5.17
<b>Theorem 5.8: Robust Discrete-Time Linear Sliding-Mode Observer Design under Uncertainty</b>	
<b>5.7. Numerical Examples</b> .....	5.18
5.7.1 Example 5.1: No Uncertainty	
(1) Original Design	
(2) New Design .....	5.19
5.7.2. Example 5.2: Matched Uncertainty .....	5.20
(1) Original Design	
(2) New Design .....	5.21
5.7.3. Example 5.3: Integral Discrete-Time SMC .....	5.22
(1) Original Design	
(2) New Design	
5.7.4. Example 5.4: 4-th Order Deterministic System .....	5.23
5.7.5. Example 5.5: 4-th Order System under Matched Uncertainty .....	5.24
5.7.6. Example 5.6: 4-th Order System Under Un-Matched Uncertainty and Disturbance .....	5.25

5.7.7. Example 5.7: Robust Sliding-Mode Observer under Un-Matched Uncertainty and Disturbance .....	5.26
<b>5.8. Conclusion .....</b>	<b>5.27</b>

## Chapter 6

# Robust Sliding-Mode Fuzzy Controller Design

<b>6.1. Introduction .....</b>	<b>6.1</b>
<b>6.2. Fuzzy Control .....</b>	<b>6.2</b>
6.2.1. Membership Functions	
(1) Triangle Membership Function	
(2) Gaussian Membership Function (Bell Function) .....	6.3
6.2.2. Fuzzification	
Remark 6.1: Normal and Weighted Fuzzifications .....	6.4
6.2.3. Fuzzy Rulebase	
(1) Soft Rulebase	
(2) Sharp Rulebase .....	6.5
(3) Full Rulebase	
Remark 6.2: Output Change in Full Rulebase	
6.2.4. Fuzzy Inference	
6.2.5. Defuzzification .....	6.6
<b>6.3. Stability of Fuzzy Control</b>	
<b>Lemma 6.1: Stability of Sliding Condition</b>	
Assumption 6.1: Bounds of Uncertain Nonlinear Systems	
<b>Theorem 6.1: Stability Criterion for Fuzzy Control .....</b>	<b>6.7</b>
Proposition 6.1: Selection of Sampling Time .....	6.8
<b>6.4. Case Studies of Fuzzy Control Structure</b>	
Remark 6.3: Fuzzy Control Variable	
6.4.1. Fuzzy Control for Slow System .....	6.9
(1) Soft Rulebase	
(2) Sharp Rulebase .....	6.10
(3) Full Rulebase .....	6.11
6.4.2. Fuzzy Control for Fast System .....	6.12
(1) Soft Rulebase	
(2) Sharp Rulebase .....	6.13
(3) Full Rulebase .....	6.14
6.4.3. Discussion .....	6.15
Remark 6.4: Benchmark Criteria	

Remark 6.5: Limitation of Bell Function	
Remark 6.6: Centroid Defuzzification more Superior than Mean-of-Maxima Method .....	6.16
Remark 6.7: Performance of Fuzzy Control for Fast System	
Proposition 6.2: Fuzzy Control Structure.....	6.17
Remark 6.9: Limitation of Expensive Computation Effort of Fuzzy Control	
<b>6.5. Sliding-Mode Fuzzy Control</b>	
<b>Corollary 6.1: Sliding Variable .....</b>	<b>6.18</b>
<b>Corollary 6.2: Sliding-Mode Fuzzy Control</b>	
<b>Theorem 6.2: Integral SMC</b>	
<b>Corollary 6.3: Sliding-Mode Fuzzy Control Design Rule .....</b>	<b>6.19</b>
<b>6.6. A New Fuzzy Identification Scheme .....</b>	<b>6.20</b>
Proposition 6.3: Fuzzy Modelling .....	6.21
<b>6.7. Practical System Identification</b>	
6.7.1. Identification of Systems with Negative Real Poles	
Proposition 6.4: Identification of Over-Damped Second Order System .....	6.22
6.7.2. Identification of System with Integral Element.....	6.23
Remark 6.10: Necessity of Derivative Response	
6.7.3. Identification of Second Order System under Sustaining Oscillation .....	6.24
6.7.4. Identification of Second Order under Damped Oscillation .....	6.25
<b>6.8. Case Studies of Fuzzy Identifications .....</b>	<b>6.27</b>
6.8.1. Static-VAR System	
(1) System Order Identification	
(2) Fuzzy Identification .....	6.28
6.8.2. Ball-Hoop System .....	6.29
(1) System Order Identification	
(2) Fuzzy Identification .....	6.30
<b>6.9. Numerical Examples .....</b>	<b>6.32</b>
6.9.1. Example 6.1: Fast Servo Motor System	
(1) Fuzzy Control with Unity Gains	
(2) Sliding-Mode Fuzzy Control	
6.9.2. Example 6.2: Static VAR System .....	6.33
(1) Fuzzy Control with Unity Gains	
(2) Robust Sliding-Mode Fuzzy Control .....	6.34
Remark 6.12: Sliding-Mode Fuzzy Control Invariant to Fuzzy Structure	
6.9.3. Example 6.3: Ball-Hoop System .....	6.35
<b>6.10. Conclusion .....</b>	<b>6.36</b>

# General Sliding-Mode Controller Design for MIMO Uncertain Nonlinear Systems

<b>7.1. Introduction</b> .....	7.1
<b>7.2. Hyperplane and Stability</b>	
7.2.1. Hyperplane Design .....	7.2
<b>Theorem 7.1: Hyperplane Design for Canonical Nonlinear Systems</b>	
Remark 7.1: Hyperplane Design for Canonical Linear and Nonlinear Systems .....	7.3
7.2.2. SMC Stability Criterion for Nonlinear Systems	
<b>Corollary 7.1: Stability Criterion</b>	
<b>7.3. Robust Discontinuous SMC Design for SISO Uncertain Nonlinear Systems</b>	
7.3.1. Discontinuous SMC Design for SISO Nonlinear Systems	
<b>Theorem 7.2: Discontinuous SMC Design for Nonlinear Systems</b>	
Remark 7.2: Reaching Control .....	7.4
7.3.2. Robust Discontinuous SMC Design for SISO Uncertain Nonlinear Systems	
Assumption 7.1: System Constraint on Parametric Variation	
<b>Theorem 7.3: Robust Discontinuous SMC Design for Uncertain Nonlinear Systems</b>	
Remark 7.3: Nonlinearity as Uncertainty .....	7.5
Remark 7.4: Alleviation of Chattering	
Remark 7.5: Performance of Pseudo-SMC .....	7.6
<b>7.4. Robust Continuous SMC Design for SISO Uncertain Nonlinear Systems</b>	
7.4.1. Continuous SMC Design for SISO Nonlinear Systems	
<b>Theorem 7.4: Continuous SMC Design for Nonlinear Systems</b>	
7.4.2. Robust Continuous Pseudo-SMC Design for SISO Uncertain Nonlinear Systems	
<b>Corollary 7.2: Robust Continuous Pseudo-SMC Design for Uncertain Nonlinear Systems</b>	
<b>7.5. General SMC Design for SISO Uncertain Nonlinear Systems</b> .....	7.7
<b>Theorem 7.5: General Discontinuous SMC Design for Nonlinear Systems</b>	
<b>Theorem 7.6: General Continuous SMC Design for Nonlinear Systems</b> .....	7.9
<b>7.6. General SMC Design for MIMO Uncertain Nonlinear Systems</b> .....	7.10
<b>Theorem 7.7: General Discontinuous SMC Design for MIMO Nonlinear Systems</b>	
<b>Theorem 7.8: General Continuous SMC Design for MIMO Nonlinear Systems</b> .....	7.11
Remark 7.6: Singular System Jacobian	
Remark 7.7: A Robust SMC Design for General MIMO Uncertain Nonlinear Systems	
<b>7.7. Numerical Examples</b> .....	7.12
7.7.1. Example 7.1: SISO Nonlinear System	
(1) Discontinuous SMC	

(2) Continuous Pseudo-SMC .....	7.13
(3) Continuous SMC .....	
(4) Performance .....	7.14
7.7.2. Example 7.2: SISO Uncertain Nonlinear System	
(1) Robust Discontinuous SMC .....	7.15
(2) Robust Continuous Pseudo-SMC .....	
7.7.3. Example 7.3: Tracking SISO Nonlinear System .....	7.16
(1) Discontinuous SMC .....	
(2) Continuous Pseudo-SMC .....	7.17
(3) Continuous SMC .....	7.18
(4) Performance .....	
7.7.4. Example 7.4: MIMO Nonlinear System	
(1) Discontinuous SMC .....	7.19
(2) Continuous Pseudo-SMC .....	7.20
(3) Continuous SMC .....	7.21
(4) Performance .....	7.22
7.7.5. Example 7.5: MIMO Nonlinear Robot Manipulators	
(1) Discontinuous SMC .....	7.23
(2) Continuous Pseudo-SMC .....	7.24
(3) Continuous SMC .....	7.25
(4) Performance .....	7.26
7.7.6. Example 7.6: MIMO Uncertain Nonlinear Robot Arms	
(1) Robust Discontinuous SMC .....	7.28
(2) Robust Continuous Pseudo-SMC .....	7.29
Remark 7.8: Steady-State Error due to Low Sliding Gain and Efficiency of Design Scheme (Prop. 3.3) .....	7.31

## 7.8. Conclusion

---

# Chapter 8

## Advanced Sliding-Mode Controller Design: Experimental Results

<b>8.1. Introduction</b> .....	8.1
<b>8.2. System Description</b> .....	8.2
<b>8.3. Instrumentation</b> .....	8.3
<b>8.4. System Identification</b> .....	8.4
8.4.1. Theoretical System Identification	
(1) Ball-Hoop Transfer Function .....	8.6
(2) DC Servo Motor Transfer Function .....	8.7

(3) Model Verification .....	8.8
8.4.2. Practical System Identification .....	8.9
<b>8.5. Digital Sliding-Mode Controller-Observer Designs .....</b>	<b>8.10</b>
8.5.1. Robust Sliding-Mode Observer Design	
8.5.2. Robust Sliding-Mode Controller Designs .....	8.11
(1) Robust Switching SMC	
Remark 8.1: Excitation of Unmodelled High-Frequency due to Switching Function .....	8.12
Remark 8.2: Slow-Down System Response due to Low Sliding Gain .....	8.14
(3) Robust TanH SMC.....	8.15
Remark 8.3: Performance of Saturate and TanH SMC .....	8.16
(4) Robust Linear SMC .....	8.17
Remark 8.4: Experimental Performance of Pseudo-SMC (TanH SMC) and Linear SMC.....	8.18
(5) Robust Sliding-Mode Fuzzy Controller.....	8.19
<b>8.6. Conclusion .....</b>	<b>8.21</b>

---

## Advanced Sliding-Mode Controller Design: Conclusion

---

## Appendix

<b>A.1. Eigenvalues, and Similarity Transformation .....</b>	<b>A.1</b>
A.1.1. Eigenvalues of a square matrix	
A.1.2. Similarity Transformation	
<b>A.2. Pole-Placement Method</b>	
A.2.1. Problem Statement	
A.2.2. Ackermann's Formula (Ogata 1987).....	A.2
<b>A.3. Matrix Operations.....</b>	<b>A.3</b>
A.3.1. Differentiation and Derivative of a Matrix	
A.3.1.1. Differentiation	
A.3.1.2. Derivative	
A.3.1.3. Jacobian	
A.3.2. Trace of an $n \times n$ Matrix .....	A.4
A.3.3. The Caley-Hamilton theorem	
A.3.4. Inversion of Matrices	
A.3.4.1. Nonsingular Matrix and Singular Matrix	
A.3.4.2. Matrix Inversion Lemma.....	A.5
A.3.4.3. Block Matrix Inversion	
A.3.5. Gradient Matrices and Frechet Derivative Operator	
A.3.5.1. Frechet Derivative Operator.	

A.3.5.2. Rule for Differentiating Functions Involving the Trace Operator .....	A.6
A.3.6 Some Gradient Matrices	
<b>A.4. Some Properties of a Determinant .....</b>	<b>A.8</b>
<b>A.5. Lie Algebra .....</b>	<b>A.9</b>
A.5.1. Covector Field Differential	
A.5.2. First Type of Differential Operation	
A.5.3. Second Type Differential Operation	
A.5.4. Third Type of Differential Operation .....	A.10
A.5.5. Lie algebra	
A.5.6. Properties.	
A.5.7. Example .....	A.11

---

## Bibliography

B.1. Sliding-Mode Control .....	B.1
B.2. Optimization & Numerical Methods and Matrix Theory .....	B.6
B.3. Fuzzy Identification and Control.....	B.7
B.4. Robust Control and Optimal $H_\infty$ Control.....	B.9
B.5. Adaptive Control .....	B.10
B.6. Neural Network.....	B.11
B.7. Nonlinear Control	
B.8. General.....	B.12
